Geoffrey Mouen
Architects

Avalon Community Center Orlando, Florida

RB Marks Construction Inc. negotiated this 12,000 sf new community in Avalon Park. This building will house the Avalon Park Property Owners Association and will be a much needed central meeting center for the entire community. The building design is concrete mono slab with cmu walls and wood truss roof structure. It also includes a blend of shingle roof with 5v crimp metal over the patios. The architectural design incorporates varying roof slopes and accent finials to gain the desired appearance. This building is on a very small site with minimal access for lay down areas. Protection and safety for the residences was of utmost concern. This project is scheduled to be completed in January 2017 and is on time and within budget.
