Primrose School Miramar, Florida

RB Marks Construction completed its fifth Primrose School in the spring of 2016. This private school located on Dykes Road in Miramar, Florida was only the second two – story Primrose School constructed in the United States. Project scope included a full turnkey site package with manifold storm drain system, concrete paving, natural and artificial turf. In addition to the site package, RB Marks installed a little tykes playground package incorporating four separate large playground areas. The building is constructed of concrete block structure with wood frame trusses and floor joists, tile roof system, exterior stucco system with foam trims, and a lime stone/precast wainscot. The project was completed on time and within budget.
